

AQUA TANKS

A Division of Galloway International Limited

The Aqua Rain Snorkel Floating Tank Outlet

Any organic matter that gets into the tank naturally sinks to the bottom. It is that organic matter (rotting leaves, sediment, and debris) that micro-organisms (bacteria) live on. The micro-organisms live amongst this sediment layer where they break down the organic matter. These micro-organisms need oxygen to live which they extract from the water and creating an anaerobic zone (low oxygen zone) in the bottom of the water tank.

The Aqua Rain Snorkel is a floating tank outlet which feeds the freshest oxygenated water from the top of the tank to the outlet, this means that the water does not carry particles through your pump and into your filters.
